Powerful security without complexity

Protecting your endpoint in a new era of work

New ways of working have led to a shift in how security leaders think about protection. Protecting the network is no longer sufficient as the number of end-user devices outside of the network grows. Modern security approaches include protecting individual devices—wherever they are.

Printers handle confidential document data, making them one of the most important endpoints to protect. A Zero Trust approach to security and better solutions for secured access are needed to provide adequate protection for endpoints. Look for an integrated solution that provides the highest level of protection while maintaining efficiency and productivity.

Meet the HP Authentication and Productivity Suite

HP Authentication and Productivity Suite is a toolkit comprised of an enterprise authentication solution and a companion mobile app providing unparalleled access control and a consistent authentication experience across devices.

HP Authentication Manager

Bringing client-controlled identity management to print devices.

HP Productivity Suite

Extend Microsoft 365 to your print devices for a seamless productivity experience.

Enable Multi-Factor Authentication (MFA)

Reduce RFID card dependency

Remain secure and compliant in Zero Trust environments

Streamlined, software-driven print device authentication for secure and compliant data control

Securely scan or print from Outlook, OneDrive, SharePoint, and Teams - directly at the printer

Access fully personalised address books, storage, and tools - centrally managed in Microsoft 365

Reduce operational costs with a reader-less flow for customers

Seamlessly integrate with your identity management system

Cloud-native solution with fast, intuitive configuration and deployment

Consistent authentication across all sites and services, including the MFP

Less reliance on supply chain, streamlined inventory controls, and accessible demonstrations

Easy integration with existing MFP solutions to improve the authentication experience at the device
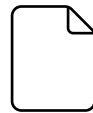

Complement or replace physical token authentication

HP's optimised Workpath compatible printers for HP Authentication and Productivity Suite

HP Colour LaserJet Enterprise 5000/6000 Series

The most advance and customisable HP A4 Laser Jets with advanced workflow solutions optimised for distributed office collaboration.
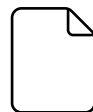

Page volume up to 25,000 per month

Number of users 10-20

HP LaserJet Managed E800/E700 Series

Best for offices and departments needing advance document workflows, finishing options and fleet management capability.

Page volumes of 40,000 per month and higher

Number of users 20+

HP's optimised Workpath compatible printers

HP LaserJet Managed E700/E800 Series

Powerful performance so work flows faster

Fast Printing Speeds:

With printing speeds of up to 70 pages per minute, you can breeze through your printing tasks without sacrificing quality.

Streamlined Workflows:

Scan once and send to multiple destinations with ease, streamlining your document distribution process.

Always-on Security:

With HP Wolf Security, our LaserJet Managed MFP E700/E800 Series offers comprehensive security features, providing constant protection for your business.

Sustainable Printing:

Reduce paper waste with efficient default duplex printing, minimising environmental footprint.

HP's optimised Workpath compatible printers

HP LaserJet 5000/6000 Series

Powerfully productive. Extraordinarily efficient.

Flexible Configurations:

Flexible printer configurations and easy to scale solutions to meet evolving workforce needs and optimise workflows.

Fast Scanning Speeds:

A powerful collaboration hub, making document digitisation easier with incredibly fast scanning and cloud-based solutions.

Always-on Security:

HP Wolf Enterprise Security provides the HP's most secure printing that protects, detects, and adapts to new threats.
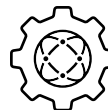

Sustainable Printing:

Reduce paper waste with efficient default duplex printing, minimising environmental footprint.

Fred IT Group modernises print environment and security with HP Authentication Suite

FRED IT GROUP

INDUSTRY:
Information Technology

COUNTRY:
Australia

Objectives:

- Convert print infrastructure to the cloud.
- Enhance existing corporate security posture.
- Integrate print solution with existing IT environment.

Outcomes:

- Implemented cloud-based print management experience with an extensive feature set.
- Maintained data privacy, control, and compliance with HP Authentication Suite.
- Effectively incorporated into existing Azure/Microsoft 365 environment.
- Removed on premises server for full cloud integration.

"The HP Authentication Suite has allowed us ultimate flexibility in our document solution. We were able to seamlessly move away from our premises authentication methods using the same HP hardware that was in place in our locations. This has not only allowed us to continue to deliver on our cloud-first strategy for end-users but has unlocked a number of features that have been well received by our team."

James Hector, Infrastructure and Operation Manager, Fred IT Group
